

PV (photovoltaic) Solar Panels on Used Wind Blades Kids Art Project

Many wind turbine blades are very big, over 100feet/30meters long, and are replaced at wind farms after 20-30 years. A project is to arrange solar PV panels (squares, rectangles, and triangles) onto a used wind turbine blade with a nice pattern. Cover a cutout wind turbine blade with pasted on squares, rectangles, and triangle blue paper cutout PV solar electric panels, as many as you like in any combination. The example sizes can be changed. Other projects can be to design things with the cutout wind blades (with PVs pasted on), like giant sunflower pergolas, etc. If you would like to send a picture of your PV Wind artwork, please send to: Joel H. Goodman, PVO Pergolas, P.O. Box 14, Dodgeville, Wisconsin, 53533, E-mail: joelhgoodman9@hotmail.com
